Service Architecture & Growth Playbook

FROM A LIST OF SERVICES TO PATHS CLIENTS CAN BUY

Competitor research, Kenya market pricing, concrete service and course paths, team-role mapping and a website update plan.

```
$ research --market kenya --competitors 6
  scanned: bonnie-computer-hub, moringa, mctaba, agency rate cards
$ design --paths build,integrate,apps,academy,care
  tiers: launch | business | commerce | platform
$ map --team roles --to services,courses
  output: pricing ladder + 90-day roadmap  [ok]
```

Prepared for the 404HubSpot team | October 2026 | Nakuru, Kenya

Prices marked Proposed are recommendations anchored to public market benchmarks, not quotes.

01 | EXECUTIVE SUMMARY

Clients don't buy a list. They buy a path.

When a client asks "what do you charge for a website from zero to hero?", the answer has to be one page, one price band and one timeline.

KSh 10k - 500k+	2 - 5x	3 - 6 days	KSh 100k - 200k
spread of website prices in Kenya	agency rates vs freelancer rates	dev time for a reliable M-Pesa STK Push	typical full-stack bootcamp fees

What the research says

- **Competitors sell outcomes with a price.** Bonnie Computer Hub puts a "from KSh" figure on every one of its website types and pairs it with a 3-month academy that ends in an internship. Visitors know the cost before they message.
- **The market is wide, so bands matter.** A basic Nairobi site can cost KSh 10,000 while complex e-commerce can pass KSh 300,000. Without clear tiers, every enquiry becomes a custom negotiation.
- **Nakuru is open ground.** The local tech scene is described as emerging with no anchor hub like LakeHub or SwahiliBox, and county ICT hubs focus on basics such as office software and online freelancing, not software engineering.
- **Your edge is already in your meta description:** M-Pesa integration, modern web and mobile builds, plus classes. Competitors mostly do one of these. Few do all of them with a build-and-teach loop.

The proposal in one glance

Pillar	What the client gets	Entry offer	Flagship offer
BUILD	Websites, stores and web platforms	Free site audit, KSh 5,000 Discovery Sprint	Business, Commerce and Platform builds
INTEGRATE	M-Pesa and payments done properly	Free Daraja readiness check	Full Daraja suite with reconciliation
APPS & SYSTEMS	Mobile apps, POS, inventory, booking	Idea workshop	Cross-platform MVP with admin dashboard
ACADEMY	Courses from first line of code to job-ready	Spark course, KSh 3,500	Full-Stack Marathon with internship
CARE	Monthly upkeep so nothing breaks	Included 30-60 days	Care Lite, Plus and Pro plans

How to read this document

Market figures come from public sources listed on the last page. Anything marked **Proposed** is my recommendation for your pricing, positioned against those benchmarks. Team slots are role-based because your team page could not be read automatically. Fill in names in section 08.

02 | MARKET BENCHMARKS

What Kenya charges today

Public prices from agencies, freelancers, hosting companies and coding schools, side by side with the bands we propose.

Service	What the market shows	Proposed 404HubSpot band
Landing page / 1-5 pages	Basic Nairobi sites from KSh 10,000; one agency rate card lists a single-page landing at KES 15,000	KSh 20,000 - 35,000
Business website (5-10 pages)	Bonnie Computer Hub corporate sites from KSh 35,000; agency card KES 34,000; freelancer range KES 20,000 - 50,000	KSh 40,000 - 75,000
E-commerce store	Bonnie from KSh 45,000; agency card KES 70,000; broader Nairobi range KSh 80,000 - 300,000+	KSh 85,000 - 150,000 with M-Pesa
Web app / portal	Agency card KES 120,000; freelancer KES 100,000 - 300,000+; custom apps from KSh 200,000 in some quotes	From KSh 150,000
Business system (POS, inventory, booking)	Agency card: basic system KES 80,000; custom software KES 160,000	KSh 90,000 - 200,000
Mobile app	Agency card: cross-platform KES 220,000; Flutter backend adds roughly 30-50% on top of the app	KSh 150,000 - 250,000 MVP
M-Pesa integration	Packages from KSh 15,000; KSh 25,000 - 60,000 inside a store build; Daraja itself is free	KSh 25,000 - 45,000 add-on
Monthly upkeep	Agency card KES 10,000 per month; annual maintenance KSh 10,000 - 50,000; M-Pesa upkeep from KSh 5,000 a year	KSh 2,500 / 6,000 / 12,000 per month
Coding courses	Moringa full-stack KES 174,000 - 200,000; McTaba KES 100,000 - 120,000; Zindua about KES 150,000; eMobilis from KES 25,000; micro courses KES 2,000 - 10,000	KSh 3,500 to 85,000 ladder

Positioning call

Sit in the middle of the market, not at the bottom. The cheapest options start around KSh 10,000 but give no support or integration. Agencies charge 2-5x freelancer rates. Your angle: **agency-grade process at near-freelancer entry prices**, with M-Pesa and a care plan built in.

Other costs clients ask about

Item	Typical range	Note
Domain + shared hosting	KSh 2,000 - 10,000 a year	Client should own the account; we set it up
SEO setup	KSh 5,000 - 20,000	Sell as an add-on or bundle into Business
Daraja production approval	2 - 10 working days	Start paperwork on day 1, it is the usual delay

03 | COMPETITOR TEARDOWN

Who we are up against, and what to take from each

Bonnie Computer Hub plus the courses and agencies a client would compare you with.

Competitor	What they do well	Gap we can use
Bonnie Computer Hub	About 50 website types across 8 industries, each with a "from KSh" price. Three academy tracks with certification and internship. WhatsApp on every page, client testimonials with live-site links, a blog with practical posts, an enquiry cart.	Front-end and back-end tracks still marked coming soon. Course stack is HTML, CSS, JS, PHP and MySQL. Team page shows one lead developer and communications roles, so engineering depth is not visible. No mobile-app or M-Pesa headline on the pages read.
Moringa School	Established brand with a 27-35 week full-stack program, a KES 40,000 intro course and up to 12 months of post-graduation support.	Fees of KES 174,000 - 200,000 put it out of reach for many Nakuru learners; no local presence here.
McTaba Labs	26-week full-stack plus AI with M-Pesa instalments, an African Stack focus (M-Pesa, WhatsApp, USSD) and self-paced courses from KES 2,999.	Nairobi hub. Fees sit around KES 100,000 - 120,000. We can match the African Stack idea at a lower price with a real-client internship.
Agency rate cards (for example TecIT, Mackdish)	Instant estimators, fixed-scope written quotes, two-week check-ins with a clickable build, WhatsApp group per project, 60 days of post-launch fixes.	Nairobi-centric. We can copy the transparency and add Nakuru presence and training.
Local public hubs (Nakuru)	Free or low-cost digital skills: Word, Excel, freelancing, ICT hubs in several wards.	Not software engineering. Learners who finish need a next step, and that step is our Spark and Frontend tracks.

Steal / Avoid / Own

STEAL

- Visible "from KSh" prices on every service
- Fixed-scope quotes and two-week demos
- Internship after the course
- M-Pesa instalments for fees
- WhatsApp-first contact

AVOID

- Announcing tracks before they are ready
- Dozens of near-identical service pages
- A team page with no skills shown
- Quoting before scoping
- Pricing at the bottom of the market

OWN

- Build + integrate + teach under one roof
- M-Pesa and African Stack as a headline
- Nakuru and Rift Valley presence
- Modern stack: TypeScript, React, Next.js, Node, PostgreSQL
- Academy graduates feeding the delivery bench

04 | SERVICE ARCHITECTURE

Five pillars, four rungs each

Every pillar has an entry offer, a core offer, a premium offer and something recurring, so a client always knows the next step.

Pillar	1. Entry	2. Core	3. Premium	4. Recurring
BUILD	Free site audit Discovery Sprint KSh 5,000 (credited to project)	Launch: KSh 20-35k Business: KSh 40-75k	Commerce: KSh 85-150k Platform: from KSh 150k	Care Lite / Plus / Pro SEO reports
INTEGRATE	Free Daraja readiness check (paybill or till, documents)	STK Push add-on KSh 25-45k	Full Daraja suite: C2B, B2C, reconciliation from KSh 60k	Yearly upkeep: credentials, API updates
APPS & SYSTEMS	Idea workshop KSh 5,000	Business system (POS, inventory, booking) KSh 90-200k	Cross-platform MVP + admin dashboard KSh 150-250k	App care KSh 10-15k per month
ACADEMY	Spark KSh 3,500	Frontend or Backend track KSh 25,000 each	Full-Stack Marathon KSh 85,000	Alumni mentoring, corporate and school workshops
CARE	30-60 days fixes included in every build	Care Lite KSh 2,500 per month	Care Plus KSh 6,000 per month	Care Pro KSh 12,000 per month

How a client moves through the ladder

Visit site sees price bands	**WhatsApp or estimator** rough range in minutes	**Discovery call** scope + fixed quote	**Build** demo every 2 weeks	**Launch + train** handover session	**Care plan** monthly upkeep

Why the Discovery Sprint matters

The most common pricing mistake is quoting before understanding the project, because "a website" can mean a hundred different things. A KSh 5,000 paid scoping step filters out time-wasters, produces a written fixed-scope quote and is credited back when the client proceeds.

Two ways the pillars feed each other

- **Academy to Build:** the best graduates join your delivery bench through the internship, which lowers your cost per project.
- **Build to Academy:** every client project becomes a case study and a capstone brief for students.

05 | PATH 1: WEB DEVELOPMENT, ZERO TO HERO

The answer to "how much for a website?"

Four tiers, one five-phase process, fixed scope. This is the page to show a client who walks in today.

LAUNCH

KSh 20,000 - 35,000

Proposed | 7-10 days

- 1-5 pages, mobile-first
- Contact form + WhatsApp button
- Domain, hosting and SSL set up
- 30 days of fixes

BUSINESS

KSh 40,000 - 75,000

Proposed | 2-3 weeks

- 5-10 pages with simple CMS
- SEO basics + Google Business profile
- Analytics + speed pass
- 60 days of support

COMMERCE

KSh 85,000 - 150,000

Proposed | 4-6 weeks

- Online store + admin dashboard
- M-Pesa STK Push + order flow
- Failed-payment handling
- Staff training session

PLATFORM

From KSh 150,000

Proposed | 8-16 weeks

- Portals, booking, SaaS MVP
- Auth, roles and database
- Fixed-scope milestones
- Handover docs + 90 days support

The five phases every project follows

Phase	Timing	What happens	Client sees
1. Discover	Days 1-3	Call, goals, content check, fixed-scope quote	Written quote and timeline
2. Design	Week 1	Wireframes, brand colours and fonts, page list	Clickable design to approve
3. Build	Weeks 2-4	Two-week sprints with a working build each time	Demo link every 2 weeks
4. Launch	End of build	Domain, SSL, M-Pesa live, speed and security check, training	Live site + handover session
5. Grow	Month 2 onward	Care plan, SEO reports, upgrade path to a bigger tier	Monthly report

Add-ons (Proposed)

- M-Pesa STK Push: KSh 25,000 - 45,000
- SEO setup: KSh 10,000 - 20,000
- Extra page: from KSh 3,000
- Half-day staff training: KSh 5,000

Care plans (Proposed, monthly)

- **Lite KSh 2,500:** hosting oversight, backups, security updates, one small change
- **Plus KSh 6,000:** uptime monitoring, monthly report, three changes, priority WhatsApp
- **Pro KSh 12,000:** five dev hours, quarterly review, API and M-Pesa upkeep

06 | WORKED QUOTE AND PATH 2

A real answer for a real client, then payments, apps and systems

Use this quote format on the website and over WhatsApp.

Worked example: a retail shop wants an online store

Line item	Amount (KSh)	Notes
Discovery Sprint	5,000	Credited back on signing the project
Commerce build	110,000	Store, admin, M-Pesa STK Push, training session
SEO setup	15,000	Titles, Google Business profile, sitemap
Project total	**125,000**	Fixed scope, 5 weeks
Payment schedule	62,500 / 37,500 / 25,000	50% to start, 30% at design approval, 20% at launch
Care Plus (from month 3)	6,000 per month	First 60 days of support included in the build

Path 2: payments, systems and mobile apps

M-PESA INTEGRATION

KSh 25,000 - 45,000

Proposed | 1-2 weeks incl. approval

- STK Push, callbacks, reconciliation
- Sandbox testing, then go-live
- Paybill or till set up guidance
- Yearly upkeep available

BUSINESS SYSTEM

KSh 90,000 - 200,000

Proposed | 4-10 weeks

- POS, inventory or booking
- Roles, reports, receipts
- On-site staff training
- 90 days support

MOBILE APP MVP

KSh 150,000 - 250,000

Proposed | 8-14 weeks

- Android + iOS from one codebase
- OTP login, M-Pesa, push notifications
- Admin web dashboard
- Store submission handled

- **Process:** one-week discovery, design in Figma, two-week build sprints with a clickable build each time, store submission, then post-launch fixes.
- **Design for weak networks:** test on mid-range Android phones over mobile data and keep key flows working offline where possible.
- **Scope warning:** a mobile front end usually needs a backend, which can add 30-50% on top, so quote them together.
- **M-Pesa timing:** the build takes days but production approval from Safaricom can take 2-10 working days. Start the paperwork in week 1.

Keep it honest

Mobile app and system ranges are wider than website ranges because scope varies most there. Always scope first, and do not publish app prices as fixed. Publish "from" figures and a Discovery Sprint.

07 | PATH 3: THE ACADEMY

From first line of code to job-ready

A ladder of courses so a learner can start small, stay with you, and finish in a real internship.

SPARK

KSh 3,500

Proposed | 2 weeks, evenings

- How the web works
- First HTML + CSS page, published
- Is coding for me?

FRONTEND

KSh 25,000

Proposed | 6 weeks

- HTML5, CSS, JavaScript
- Responsive design, React intro
- Two portfolio sites

BACKEND

KSh 25,000

Proposed | 6 weeks

- Node, REST APIs, PostgreSQL
- Authentication and testing
- Deploy a live API

MOBILE (FLUTTER)

KSh 35,000

Proposed | 8 weeks

- Flutter and Dart basics
- Offline data, forms, navigation
- Publish a working app

AFRICAN STACK ADD-ON

KSh 15,000

Proposed | 4 weeks

- Daraja STK Push and C2B
- Callbacks and reconciliation
- WhatsApp API, USSD basics

FULL-STACK MARATHON

KSh 85,000

Proposed | 24 weeks, M-Pesa instalments

- Frontend + backend + African Stack
- Capstone on a real client brief
- Certificate + internship

Full-Stack Marathon: week-by-week

Phase	Weeks	Content	Output
1. Foundations	1-4	HTML, CSS, Git, command line, JavaScript basics	Two static sites
2. Frontend	5-9	JavaScript deep dive, TypeScript, React, Next.js, UI basics	Portfolio + client-style site
3. Backend	10-15	Node, REST APIs, PostgreSQL, authentication, testing	API + admin dashboard
4. African Stack	16-19	M-Pesa Daraja, WhatsApp, deployment, security	Store with M-Pesa sandbox
5. Capstone + internship	20-24	Real client brief in a team, code review, demo day	Deployed product + certificate

Why this price (Proposed)

- McTaba is around KES 100,000 - 120,000 and Moringa KES 174,000 - 200,000, so KSh 85,000 undercuts both.
- Short paid courses elsewhere run KES 25,000 - 40,000, which anchors the 6-week tracks.
- Micro courses sit at KES 2,000 - 10,000, which anchors Spark.

Cohort economics (illustration)

- 15 students x KSh 85,000 = KSh 1,275,000 per Marathon cohort
- Evening and Saturday classes so learners can keep working
- Capacity decision: how many internships you can supervise on live client work

08 | TEAM MAPPING

Match every person to what they sell and what they teach

Role-based because the team page could not be read automatically. Put a name against each role, and one person can hold several.

Role	Owns (services)	Teaches	Skill tags to show on the site	Name
Founder / Lead Engineer	Platform builds, architecture, final code review, client discovery on big projects	Full-Stack capstone, Backend track	System design, TypeScript, APIs, databases	_____
Frontend / UI Engineer	Launch and Business sites, design-to-code	Spark, Frontend track	HTML, CSS, React, Next.js, accessibility	_____
Backend / Payments Engineer	Commerce stores, M-Pesa Daraja, business systems	Backend track, African Stack add-on	Node, PostgreSQL, Daraja, WhatsApp API	_____
Mobile Engineer	Mobile app MVPs, app care	Mobile (Flutter) track	Flutter, Dart, offline-first, store releases	_____
Product Designer	UX, Figma, brand packs, design reviews	Design for developers workshop	Figma, UX writing, brand systems	_____
Instructor / Academy Lead	Cohort planning, assessments, internships	Coordinates all tracks	Curriculum, mentoring, project coaching	_____
Client Success / Growth	Enquiries, quotes, onboarding, content and SEO	Career talks	Client communication, SEO, social, copy	_____

How to fill it in (30 minutes)

- **Step 1:** each person lists their top three skills and one thing they enjoy teaching.
- **Step 2:** match people to roles, leaving a role empty rather than forcing a fit. An empty role is a hiring or training plan.
- **Step 3:** set each person's monthly billable hours and a rate. For early-career developers, KES 500 - 1,000 per hour is a common starting range, and agencies charge 2-5x that.
- **Step 4:** publish skill tags and the courses each person teaches on the team page, because competitors' team pages hide this.

> **Rule of thumb for scheduling**
> No one should teach more than two tracks a quarter while carrying client work. If a role has only one person, plan a backup, because a sick day should not cancel a cohort or a launch.

09 | WEBSITE UPDATE PLAN

Turn the site into a sales page for each path

Page structure, what each page must contain, and quick wins for this week.

Page	Purpose	Must include
Home	Split visitors into Build and Learn	Two clear paths, proof strip, three CTAs: WhatsApp, estimate, apply
Services hub	Show the five pillars	From-prices, tier comparison, link to each service page
Service pages (x5)	Close the sale	Who it is for, what is included, timeline, from-price, process, FAQ, CTA
Pricing	Answer cost questions fast	Tier tables, add-ons, care plans, payment schedule, estimator that sends a WhatsApp message
Academy	Fill cohorts	Tracks, syllabus, fees, M-Pesa instalments, next cohort date, apply form
Case studies	Prove it	3-5 projects: problem, stack, result, live link
Team	Show real skills	Role, skill tags, courses taught
Guides (blog)	Win search	How much a website costs in Kenya, how to accept M-Pesa, bootcamp fees compared
Contact	Remove friction	WhatsApp first, short form, Nakuru address and hours

Check this first: can search engines read your pages?
When I fetched the home page and the /services and /team addresses, I only received the page title and description, not the content. That means the site builds its pages in the browser. Visitors are fine, but crawlers, link previews and some tools may see an empty shell. Confirm in Google Search Console, and if it is the case, move to server-rendered or pre-rendered pages (for example Next.js) so services and prices are indexable.

Quick wins this week

- Add a WhatsApp button on every page with a pre-filled message per service.
- Publish the four website tiers and the three care plans on one pricing page.
- Replace long service lists with five pillar cards, each with a from-price.
- Put "M-Pesa integration" and "Learn to code in Nakuru" in the home page headline area.
- Write one guide post: "How much does a website cost in Kenya?" using your own tiers.
- Only announce tracks that have a start date.

10 | 90-DAY ROADMAP

From playbook to live offers

A realistic sequence for a small team doing client work at the same time.

When	Focus	Deliverables
Days 1-7	Decide	Fill the team roster; confirm price floors; choose which tiers launch first; write one-page descriptions for each tier
Days 8-21	Publish	Pricing page, services hub, WhatsApp CTAs, estimator v1; fix crawlability if needed
Days 22-45	Prove	Two case studies; Spark pilot cohort; academy page with apply form; first guide posts
Days 46-90	Scale	Open Full-Stack Marathon enrollment; collect testimonials; review win rate and adjust prices; hire or train for empty roles

Numbers to track weekly

Metric	Why it matters	First target (suggested)
Enquiries per week	Shows whether the site and pricing page attract clients	Set a baseline in week 2
Quote-to-win rate	Tells you if prices and scope are right	Review monthly; adjust bands if very high or very low
Average project value	Shows if clients move up tiers	Rising each quarter
Cohort fill rate	Academy demand	Fill the Spark pilot before pricing the Marathon
Care plan attach rate	Recurring revenue	Offer on every launch

What I still need to finish the team-specific version

1. Each team member's name, role and top skills.
2. The services and prices currently on the live site, pasted as text.
3. How many projects and students the team can handle at once, and whether classes are online, in person in Nakuru, or both.
4. Any existing case studies or testimonials.

With these I can replace the role slots in section 08 with names and tune capacity, prices and the academy calendar.
